Outer joint part with supporting disc**Abstract**

An outer joint part 12 of a constant velocity universal joint 11 in the form of a joint bell 16 with an attached connecting journal 17 and a radial supporting face 18 at the joint bell 16 at the base of the connecting journal 17, wherein the outer joint part 12, by means of threading means, can be tensioned relative to a wheel hub 25 which has to be slid on to the connecting journal and which is supported either directly or indirectly on the supporting face 18, wherein there is provided an annular disc 22 which is made of a low-friction material and which is positioned on the supporting face 18 so as to be concentric relative to the connecting journal 17.
